

PREPARE YOUR PROPERTY TO OBTAIN A SUCCESSFUL INSTALLATION OF YOUR ACELERA SERVICE

ACELERA is a high-speed permanent connection service to Internet via ADSL, and with plane rate. It is installed on the telephonic wiring and allows to be connected to Internet and talk by telephone at the same time. To be able to enjoy of this service, technicians of the ICE Company will install a terminal CPE device (ADSL Modem) and a Splitter (Separator of voice and data frequencies) in your premises.

For this reason it is necessary to **fitting out the internal telephone network of the premises** before the technician goes to install the service; the above-mentioned if you want the wiring not to be installed in an exposed manner (this means that the wiring will not pass through any duct). In the contrary case, ICE technicians can perform the work provided that you agree in the cable to be installed in an exposed manner.

For the preparation of the premises follow the following steps:

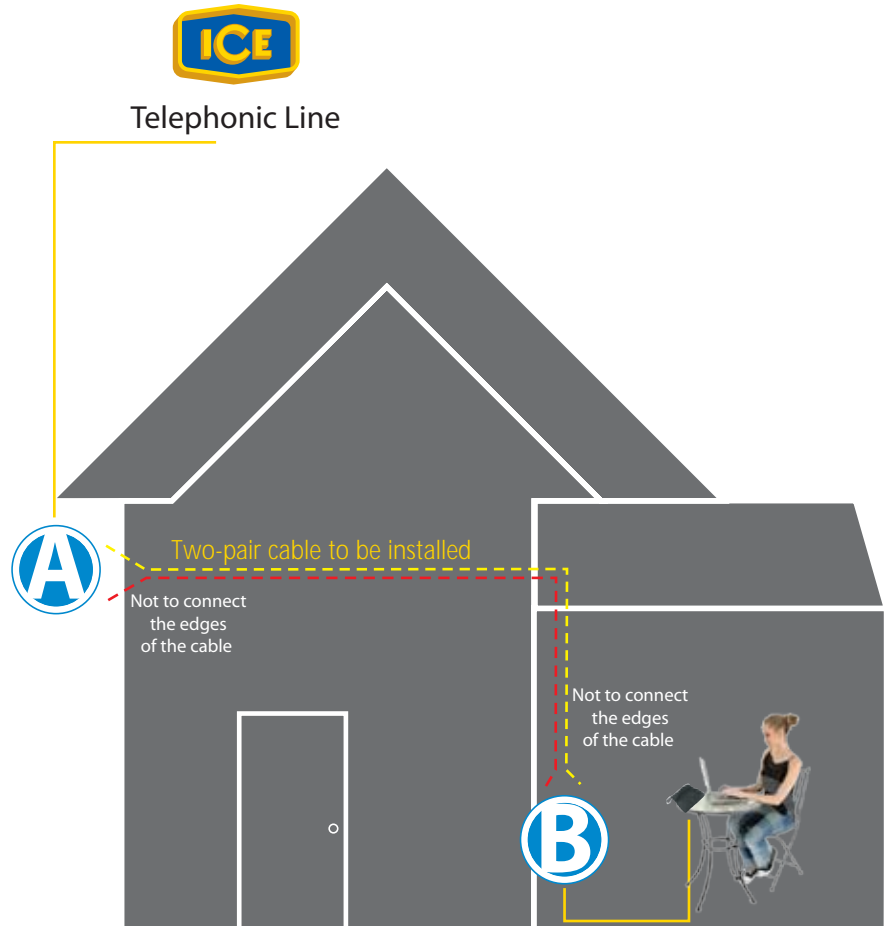

Fig. 1

1. Utilize the diagram shown in Figures 1 and 2 as an installation example, to properly understand the directions.
2. Choose an adequate place to permanently locate the computer. You must have a 110 volts switch, and a telephonic connection at least 2 meters from the place selected.
3. Install a telephonic cable of two or four pairs from the spot where the ICE network is interconnected (point A), up to the position where you are going to place the computer (point B).
4. At the ends of the cable (points A and B) you must leave a spare of at least 30 centimeter, so that the ICE technician makes and finalizes the installation.

Note: Verify that previous to point A, there are no derivations of the cable or alarm or telephonic devices connections, if there were any, you must eliminate them and then reconnect the equipments on the telephonic service.
